Motherboard. The specs are not bad at all. I used all of mine on the P5Q Pro and Deluxe with no problems. And actually, the system operates at 99°C at full load with Accelero Twin Turbo and MX2 at 100% fans. Any further help is appreciated.

Specifications:
- Asus P5Q-PRO motherboard
- Intel Q6600 at 2.4 GHz with TX3 cooler
- Manuals and user guide free PDF downloads for Asus P5Q Deluxe - Motherboard - ATX

At that resolution, you should be fine with those specs. Is that a Asus P5Q-PRO turbo? What is that mobo? I think I had one like that. Asus P5B variant? My System Specs MOBO:
- Asus P5Q Pro Turbo (P45 chipset)
- Ram: OCZ PC2-8500 DDR2 Reaper 2x2GB
- VID: EVGA GeForce GTS 250 1Gb 256bit GDDR3
- Abit IL9 Pro, 945P / ICH7, 1066, ≥ 65, E6700 (see notes), May not be compatible
- ASUS P5Q Pro Turbo, P45 / ICH10R, 1600, ≥ 136, Q9650, QX9770, All
- Cooler Master GX 550 Bronze + PSU
- Asus P5Q Deluxe
- 500GB HD

I'm wondering if the motherboard is Intel or AMD. Here's the specs:

46. dkerzlang - Asus P5KPL-AM EPU
47. intel_inside - Asus P5Q Pro Turbo
48. rhemzeronine - Asus P5NSLI, P7P55D Deluxe
49. romster - Maximus III Gene

This is what I have. I was thinking about spending $400-$500 on an Asus P5Q Pro Turbo with Intel Core 2 Duo E8600 3.33Ghz @ 4.0Ghz and a Thermaltake NiC C5 CPU Cooler.
